

RAIL BALTICA RAIL AS

RAIL BALTICA CCS SUBSYSTEM PROCUREMENT AND DEPLOYMENT STRATEGY

Rail Baltica creates an efficient rail link between the Baltic capitals and connects them to the EU rail network. R+R advised the customer on the procurement of a train management and control system and provided information on how to organize this sub-project.

Today there is no efficient rail link between the capitals of the three Baltic states or between the Baltic States and the other EU countries. The new high-speed line Rail Baltica will create this link and connect to the EU rail network at the Polish border. The future train management and control system was the subject of a technical and organizational study.

Client	Rail Baltica Rail AS
Processing period	January 2020 – October 2020
Project costs	5.8 billion CHF

R+R helped with the market analysis and the procurement strategy and provided examples of a suitable project organization.
